

Laser etching service

Are you afraid of losing your drive and data forever?

Customise your encrypted drive with your name, email address, phone number or logo.

The laser etching service is accomplished by laser etching your text and/or logo on to the sleeve, the side of the drive or on the back of the drive.

This is performed in-house by the iStorage design team.

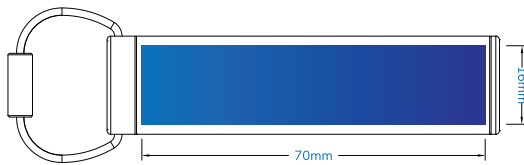

- This service is useful for corporate branding and lost & found information
- No minimum order quantity required

Products suitable for laser etching:

- datAshur
- datAshur SD
- datAshur Personal²
- datAshur PRO
- datAshur PRO°C
- datAshur PRO²
- cloudAshur

Preloaded resources

iStorage can preload documents or software on to the drive before deployment.

Preloaded resources can include items such as applications, presentations, corporate documentation, web links, portable applications, videos etc.

Product identification

The entire iStorage range incorporates unique PIDs.

This option is useful for “White-listing” using Endpoint software, so that only authorised devices can be used on the corporate network.

Original equipment manufacturer (OEM)

The cloudAshur, datAshur, datAshur SD, datAshur PRO/PRO2 and datAshur Personal² can be completely rebranded so that it reflects your company’s individual look - minimum order quantities (MOQ) apply. Please contact us for more information.

Pre-programmable PINs

The entire iStorage range can be pre-programmed with your unique administrator and/or user PINs that conform with your corporate password policies. This saves time during the deployment process.
